National Records Agency - Internal Audit

Report IA/2025/14: Review of IT Systems Currency and Information Security Compliance
Issued 18 Mar 2026. Extract: Finding 3 only. Classification: Restricted

Finding 3 - Records Management System (RMS) is unsupported and non-compliant

Rating: High

Observation

The RMS is running Version 3.2, for which vendor support ended on 30 Jun 2026. Unsupported software no longer receives security patches and does not meet the IM8 requirements on supported software and vulnerability management.

The RMS storage array was at 91% of capacity at the time of audit. The FY2026 digitisation intake of approximately 18 TB cannot be accommodated without expansion.

Risk

Loss or compromise of agency records; inability to ingest new digitised records; adverse findings from the Government's annual IM8 compliance review.

Recommendation

Management should upgrade the RMS to a vendor-supported version and replace the storage array before the FY2026 digitisation programme commences. Interim support should be arranged if the upgrade cannot be completed within FY2026.

Management response

Agreed. Information Systems Department will submit a budget request for the RMS Version 5 upgrade in FY2026. Target completion: Q1 FY2027. Owner: Deputy Director (Information Systems).
